

Linux Compatibility & Open Source Tools for HP-UX

Mary Kwan
Product Marketing Manager
Hewlett-Packard Company
Mary_kwan@hp.com

Because of its neutral development environment, Linux has been embraced by the Open Source community and continues its hyper growth in market adoption. Now, HP-UX developers can also benefit from Linux. By using several different Linux Compatibility solutions with Open Source tools for HP-UX, ISVs and e-services developers can develop their applications on Linux and then deploy on either the HP-UX PA-RISC or the HP-UX Itanium Processor Family (IPF) systems. During this talk, we will discuss the overall growth & hype with Linux and Open Source within the software development community, the different Linux Compatibility solutions with Open Source tools for HP-UX, and what the future will hold for Linux and HP-UX.
